

We sell the engine room.

持續快速演化增長的 AI 基礎設施引擎服務

AI creates infinite possibilities. VIA accelerates them into reality.
AI 即造無限可能，VIA 加速願景成真。

Veritas Intelligence Analytics is an **infrastructure service** — the AI engine room that grows new, enterprise-grade applications across any domain in **weeks, not years**. The applications keep evolving; the infrastructure is the product.

產品是基礎建設「服務」—— 各領域應用持續演進，但都不是銷售標的；關鍵與護城河，是基礎建設本身。

Infrastructure Services · the product

Applications · evolving proof, not for sale

Append-only · offline-degradable

PLATFORM STACK	
Veritas Workbench	APPLICATION · 引擎
▲ enabled by	
VDF · VRN · VAP	FUNCTIONAL CORE
▲ pulled by VRN	
Celestias · Aegis · SSOT · Env · Registry	INFRASTRUCTURE · the product

0.0%

100% - 1000000

The near-zero standard VRN demanded – the forcing function that built the platform.

10tx

100% - 1000000

Env - Registry - SSOT - Aegis - Calentis mounted to one shared execution context.

10+

100% - 1000000

YDF / VRN / VAP functional cores on a governed support-module fabric.

Keep evolving

100% - 1000000

append-only, auditable, reversible – the platform never silently loses state.

From a PM who could not rest.

源起：一個週末無法休息的場景

The origin was not an AI product idea. It was a real operational burden.

A project manager at a leading electronic-components company — already running PM work — was asked to support a PLM rollout that had to coexist with legacy SAP and MS Project.

Every Monday meant a status briefing. Every weekend meant chasing data scattered across email, attachments, tables, charts, minutes, old systems and people's verbal accounts.

家人在電子零組件龍頭工作，本職是 PM，又被加上 PLM 導入任務，還得與既有 SAP、MS Project 並存。每週一簡報，代表週末無法真正休息 — 因為資料散落在信件、附件、表格、圖、會議紀錄與舊系統裡。

A	Multi-system coexistence — SAP, MS Project & a new PLM, none speaking the same language. 多系統並存，語言、欄位、命名各自為政
B	Scattered evidence across email, attachments, tables, charts and meeting notes. 郵件、附件、表格、圖、紀錄與簡報
C	Manual weekly rework — status rebuilt from zero, every single week. 專案狀態靠人工整理，每周重工
D	No automatic reconciliation between PLM / SAP / MS Project. 系統之間缺乏自動對帳
E	No traceable SSOT — knowledge lived in human memory, not an auditable layer. 知識存在腦中，而非可追蹤的資料層

The real problem was never the report.

It was the absence of a governed single source of truth.

One platform, three strata.

VIA 是基礎建設賦能層・VDF / VRN / VAP 是功能核心・Veritas Workbench 是建立其上的應用工作站

VRN didn't use the platform. VRN forced it into existence.

真正的發展順序是反的 — VRN 的極高要求，逼出了 VIA 的支援模組與功能核心

Parsing investment reports — PDF, OCR, tables, in-image data, semantic repair, financial figures — carries almost no margin for error. One wrong field, one missed table, one misread number, and every downstream valuation, risk model and decision is contaminated. That intolerance is what built the infrastructure. 一個欄位錯，後續估值、風險、策略全被污染 — 容錯率近乎為零，正是這份嚴格逼出了整套地基。

VeritasCelaritas 證據鏈 evidence chain

OCR, imaging, table & semantic repair plus mass validation are heavy.

Processes large volumes of email, attachments, tables and weekly-report data **at speed**.

VeritasAngisNexus 網絡偵探 network

Needed stable, compliant, auditable bulk data acquisition.

Connects authorized email, system exports & enterprise sources with full **evidence trail**.

VIA_SSHOT_Unified 真相庫 SSOT

Fields, aliases, abbreviations and house jargon had to be unified.

Builds **Auto-SSOT** and cross-system semantic mapping automatically.

VIA_EnvManager 環境治理 env

OCR / PDF / Imaging / DB / AI stacks are brutally hard to keep stable.

New Workbench features deploy fast — never strangled by dependency conflicts.

VIA_RegistryCore 註冊治理 registry

Growing tool count must be registered, classified, risk-tracked.

Keeps Workbench's modules from becoming an unmanageable **nine-headed Hydra**.

VAP - VisualGov 視覺治理 visual gov

Complex pipelines must be made visible to be trusted.

Generates process maps, status matrices and briefing-ready slides.

Asset - Methodology 智慧資產 assets

Modules, prompts, templates, rules must stay traceable & reusable.

Lets Workbench knowledge, corrections and methods **compound over time**.

Infrastructure as a moat.

支援模組最初不是為應用而生，卻成為每個新應用的加速器

VeritasCeleritas

Hardware-aware speed: CPU / RAM / thread budgets, memory pools, parallel engines, cache, JSON/compression/washing.

不是盲目加速，而是用硬體狀態與任務特性控制速度 — 讓傳統電腦也能跑大型自動化。

VeritasAegisNexus

Authorized-only acquisition: robots check, bounded timeout, offline mode, rate guard, risk blocking, cache.

大量細微不只是技術問題，而是合規與可審計問題 — 每次抓或都留下來源、權限、時間。

VIA_SSOT_Unified

Corpus of regex / lists / synonyms / aliases with normalize - extract - contains -asset dump/load/patch.

不只是字典 — 同時支援標準化、抽取、檢查、資產儲存與應用，是 Auto-SSOT 的基礎。

VIA_EnvManager

Unified venv / libs / alias / route / health / conflicts / rebuild — append-only, offline-capable, non-destructive.

新增工具必須先經 EnvManager 決策 — 讓腳本在可控環境治理下進行，而非亂裝套件。

VIA_RegistryCore

Append-only registry governing module scan, register, resolve, route & execution entry.

工具最多都不能靠記憶 — 集中治理，是避免系統變成九頭龍的關鍵。

Prompt · Methodology · Asset

Prompt schemas, hypothesis/counter-evidence methodology, traceable asset IDs with correction history.

AI 不能每次憑感覺輸出 — 固定分析邏輯、反證流程、人機校正全部成為可累積資產。

Veritas Workbench.

由基礎建設賦能的應用範例之一 — 各領域應用持續演進，本身不是產品，只是平台成熟度的證明

It connects authorized communication, documents, legacy systems and project records into a traceable intelligence layer — turning **text into data**, **tables into databases**, **workflows into process maps**, **corrections into knowledge**, and weekly reporting into a governed human-in-the-loop cycle.

An AI automation workstation for PLM, project management, Auto-SSOT and process mining — enabled by the VIA infrastructure layer.

面向 PLM、專案管理、Auto-SSOT 與流程探勘的 AI 自動化工作站，不取代 SAP / MS Project / PLM，而是在尊重既有系統的前提下，負責同步、清理、分類、編號、驗證、視覺化與生成週報。

- Legacy-first · 尊重舊系統
- Authorized-only · 不越權竊取
- Evidence-first · 結論可追溯

HUMAN-IN-THE-LOOP CYCLE	
01	Authorized capture — email · attachments · SAP / MS Project / PLM exports · local files
02	VRM-like parsing — text repair · table reconstruction · in-image data · attachment routing
03	Auto-SSOT — field unification · keyword corpus · jargon mapping · cross-system naming
04	Process mining — flow reconstruction · bottlenecks · responsibility & gap matrices
05	Human checkpoint — review · expose uncertainty · list possible failure causes · correct
06	Report & slides — weekly report · pivots · charts · briefing draft
07	Learning ledger — corrections written back to knowledge & methodology — next week is sharper

Why it ships fast.

Workbench 快，不是因為需求簡單，而是因為 VIA 已先把最難的地基做好

Email & attachment parsing · 信件附件解析
VRN parsing · VAP visual layer

Auto-SSOT · 自動異相源
SSOT_Unified · Registry · Asset Mgmt

Fast processing on commodity hardware · 普通電腦也跑得夠
VeritasCeleritas

Authorized data acquisition · 合規擷取
VeritasAgisNexus

Stable local runtime · 穩定本機執行
EnvManager · RuntimeBridge

Reports, charts, pivots · 透視圖表
VAP · Prompt · Methodology · VisualGov

Process mining & correction loop · 流程探勘與校正
Methodology · Knowledge Ledges · Matrix

From scratch, this is a multi-year enterprise build.
On VIA, the hardest layers were already done.

The "doomsday" test is a requirement, not an incident.

全團降離職、無網路、無 AI — 這不是災難故事，而是系統韌性標準

Under degraded conditions — no network, no external AI, no clean handover — the system must not hallucinate certainty. It must degrade honestly into a deterministic rule engine. 真正的測試不是「還能不能幻想答案」，而是能否誠實產出可追蹤、可檢查、可接手的最低可用成果。

NO NETWORK · 斷網路 Use local cache, last-sync state & offline SSOT for classification and reconciliation. Never claim it fetched fresh cloud data.
NO AI · 無 AI 支援 Fall back to a deterministic rule engine, template reports, fixed classifiers. Never let the whole system collapse.
NO HANDOVER · 無交接 Generate a handover pack: project list, responsibility / risk matrix, process map, gap list. Never pretend to know un-handled-over context.

If it still produces a conservative report, a risk matrix and a handover pack offline — it is no longer an assistant. It is operational infrastructure.

Three super-core upgrades.

Workbench 不是終點，而是 VIA 下一階段升級的觸發器

AASSET

Smart Asset Management

智慧資產管理

AssetID · Version · Owner

Source · Dependency · Checksum

Usage history

Human-correction history

BMETHOD

Methodology Mgmt

方法論管理

Hypothesis · counter-evidence

Reasoning path · sources

Possible failure modes

Decision basis · next improvement

C PROMPT

Prompt Management

Prompt 管理

PromptID · role · risk

Input / output schema

Validation rules

Revision & feedback history

這三者讓 Workbench 從「幫忙整理」升級成「幫忙看清楚事情」，也是整個 VIA 的方法論與執行中樞。

Investment thinking, made verifiable.

Veritas Strategy Core — 把各類投資思維轉為可驗證流程（內部規則與訊號為機密，僅示意引擎拓樸）

We sell infrastructure services, not applications.

產品是 Veritas Intelligence Analytics 基礎建設「服務」 — 各領域不斷演進的應用都不是銷售標的，關鍵在基礎建設本身，而非任何單一應用

THE PRODUCT · 銷售標的

Infrastructure Services

基礎建設服務

支撐引擎 Support Engine + 功能引擎 Functional Engine

- VIA Support Fabric — Celeritas Aegle SSOT Env Registry Runtime
- Functional Core — VDF VRN VAP
- Delivered as a service: licensable platform repeatable
- 可複製到任何垂直領域的 AI 開發地基

This is the moat. 真正的產品是這套基礎建設服務 — 它讓任何新應用在數週內成形，價值隨每個專案複利累積。

NOT FOR SALE · 非銷售標的

Evolving Applications

各領域應用

Veritas Workbench Finance PLM ...any domain

- PLM 專案管理 Auto-SSOT 流程探勘 巡視
- 金融分析 估值 風險 策略 其他垂直領域
- 持續演進、可被替換、而非標準化商品
- 角色：證明基礎建設已成熟，能快速生成企業級應用

應用會變，會被取代；不變的是底層基礎建設，關鍵在基礎建設，而非應用。

Applications change. The infrastructure compounds.
That service layer — not any single app — is what you invest in.

We sell the **infrastructure**.
Supportive engines + functional
engines,
Applications across every domain are
evolving proof —
never the product. The engine room
is.

Veritas Intelligence Analytics 基礎建設服務（支援引擎 + 功能引擎）

各領域應用持續演進，但都不是銷售標的
關鍵與護城河，是基礎建設本身——而非任何單一應用。

AI creates infinite possibilities. VIA accelerates them into reality.

AI 創造無限可能，VIA 加速願景成真。
